

## Waste incineration plant Indaver-Suez - Doel

### Project Details

#### Activities

Civil Engineering  
Heavy industry

#### Contractors

Willemen Construct

#### Location

Haven 1940, Molenweg  
9130 Doel Belgium  
Oost-Vlaanderen BE

#### Client

Lurgi

#### Engineering Office

Arcade

The project concerns the construction of the new waste incinerator that recuperates energy from the incineration of waste.

The complex consists of an unloading hall, a concrete waste bunker, a furnace building, a turbine building, various concrete ash bunkers and a building for the scrubber.

The concrete bunkers are 40 m high and were constructed using a slipform.

Various 40 m high steel structures were also installed to accommodate the different parts of the production process.

The capacity of the fluidised bed furnace is 430 000 tonnes/year.

This makes it one of the largest on the European continent.
