Client
APM Terminals

Temporary partnership
Willemen Infra, Cosimco, Franki Construct

Construction period
2 years 2 months

Start work
02-2017

End of work
04-2019

On a 60-hectare site in the port of Tangier, we were responsible from A to Z for the realisation of a container terminal with a quay length of 1.2 km and all associated buildings. The terminal features the latest cargo handling technology to meet the needs of large ships. Twelve remote-controlled STS double trolley cranes - the largest in the world - are responsible for loading and unloading ships with at least 22,000 containers on board. APM Terminals MedPort Tangier has a capacity of 3.3 million teu per year and is one of the most technically advanced terminals in the world.

Willemen Infra is a leading, Belgian road construction company with a regional presence in both Flanders and Wallonia. An important asset is that we have all aspects of the construction process under our own management and thus fully control the execution. Moreover, our team of 1,000 well-trained and experienced employees are willing to work at night and over the weekend to make sure they get everything done in time. In addition, thanks to our own COPRO-certified production and recycling sites, we are one of the leading producers for asphalt and road concrete.
