Drinking water tank - Asse

Project Details

Activities
Civil Engineering
Water engineering

Contractors
Willemen Bouw

location
Gentsesteenweg
1730 Asse Belgium
Vlaams Brabant BE

Client
Tussengemeentelijke Maatschappij der Vlaanderen voor Watervoorziening (TMVW)

Start work
06-2020

Construction of a cylindrical concrete drinking water reservoir with an inner diameter of 38.4 m, a wall (via sliding formwork) with a thickness of 45 cm and a height of 16.5 m, including surrounding construction.

This project is a necessary part of the Aqueduct project that optimises drinking water supply in East and West Flanders. It is a collaboration between De Watergroep, Water-Link and TMVW to meet the demand of the Flemish government to better align production and consumption and strengthen security of supply. The new digester forms an extra buffer to cope with peak consumption or problems in the production and supply of drinking water.
