Client

Infrabel

Special features [BIM](#)

Construction period

10 months

Start work

08-2020

End of work

06-2021

Demolition of the existing bridge and modification of the abutments, overhead lines, roadway and drainage. Above the railway, we will build a new steel bowstring bridge together with Almex. In September 2020, preparations started for the overhead line works. In early October, the temporary pedestrian bridge was installed to maintain a connection between the centre of Muizen and the school across the station. Demolition of the old bridge was scheduled for the weekend of 11 October. On the weekend of 13 and 14 February 2021, the new bridge was installed.
